Report for: Marc van Kampen Assessment date: 30/11/2023

About this report

This report provides information about how Marc van Kampen performed on the Logiks General (Advanced) test. The information provided in this report is confidential and intended only for use by trained test administrators.

About the test

The Logiks General (Advanced) test has been designed to quickly and accurately assess an individual's general ability. The test contains verbal, numerical and abstract questions which are presented in three separately timed sections.

The test is item-banked, meaning that each candidate is presented with a different set of questions. Each test is balanced for difficulty to ensure assessment is reliable and fair.

In addition to providing information regarding the respondent's general mental ability, the report also provides information regarding test taking style:

- Speed is the number of questions attempted.
- Accuracy is the percentage of questions answered correctly, out of the number of questions attempted.

Important notes

When reading this report, please be aware of the following points:

- If the test was taken under unsupervised test conditions, it is advisable to re-test the candidate in a supervised setting.
- · Ability can improve with practice, training and development. Therefore, if more than 12 months have elapsed since the respondent took the assessment, the individual should be asked to complete the test again.

Interpretation

The test results are interpreted by comparing them with the results obtained from a large group of people who have also completed the Logiks General (Advanced) test (a norm group). For this report, the norm group used for comparison was:

Belgium (General) 1.0

Measurement error may mean that the candidate's true, or actual, scores are slightly higher or lower than those obtained on the Logiks General (Advanced) test. Please bear this in mind when reading the results overleaf.

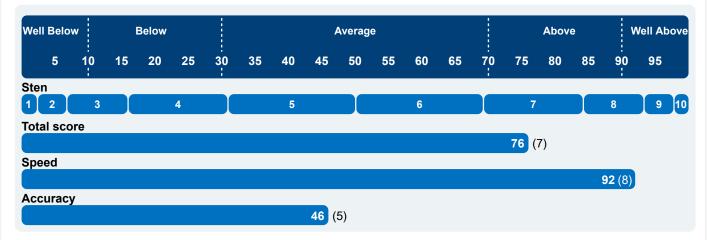

Report for: Marc van Kampen Assessment date: 30/11/2023

1. Test results

1.1 Key test results

The graph below shows Marc van Kampen's overall general ability score and speed and accuracy scores. The scores are shown as percentiles (percentage of the norm group that a score comes above) and as stens (standardised score presented on a 1-10 scale).

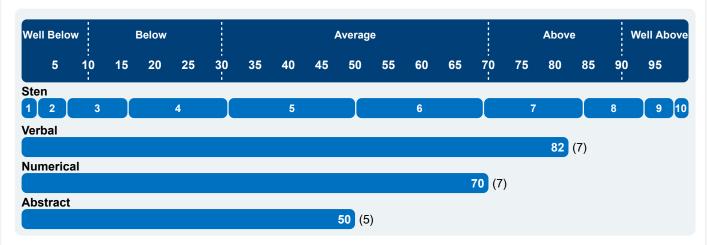

Marc van Kampen's **total score** on the Logiks General (Advanced) test was **above average** compared to the norm group. This suggests that Marc van Kampen's general reasoning ability is better than that of most others in the comparison group. Marc van Kampen is therefore likely to demonstrate high levels of mental agility in a variety of contexts.

Marc van Kampen's **speed score** was well **above average** and Marc van Kampen's **accuracy score** was **average** compared to the norm group. This means that Marc van Kampen adopted a very high work rate compared to others and worked as accurately as most.

1.2 Detailed breakdown of scores

'The graph below shows Marc van Kampen's performance on the three sub-tests of the Logiks General (Advanced) test. The scores are shown as percentiles (percentage of the norm group that a score comes above) and as stens (standardised score presented on a 1 - 10 scale).

Marc van Kampen's performance on the **verbal** sub-test was **above average** compared to the norm group. This suggests that Marc van Kampen's ability to work with and understand information presented in the form of written text is better than that of most others in the comparison group.

Marc van Kampen's performance on the **numerical** sub-test was **above average** compared to the norm group. This suggests that Marc van Kampen's ability to work with and understand numerical information is better than that of most others in the comparison group.

Marc van Kampen's performance on the **abstract** sub-test was **average** compared to the norm group. This suggests that Marc van Kampen's ability to work with and understand information presented in the form of diagrams is as good as that of most others in the comparison group.
